MEET TEAM

you   tired   of
writing   script
manually
whenever   you
restart   your
systems to start
Django? 🙁

Don't   worry
about it. Today
we are going to
learn how to start
Django
automatically
after   restarting
development   or
local
systems/server in
Linux.

**Please don't use
this script on the
live server, this
script is for only
development or
local system.**

Start
Django
automati
cally
after

g develop ment or local system/s erver in Linux

1. First open gedit in your Linux system.
Run the following command in terminal.**$gedit**

2. Now we create script for start Django server In gedit

```
1  #!/bin/b
2  clear
3  cd /path
4  . bin/ac
5  cd /path
6  python m
```

After that save this file with **.sh** extension. I have saved this file as **script.sh** in the following example.

ANDROID | **ODOO (OPENERP)** | **DJANGO** | **IPHONE** | **TRICKS** | **NEWS**

| **MEET TEAM** | *Script for start Django server In gedit script.sh* | | | | | |

3. Run following command in terminal for giving execution permission to your script
$ chmod u+x script.sh

4. To test your script works perfectly, add following command in terminal
$ ./ script.sh

5. After that, you have to create cron job on your machine for run script automatically on reboot give following command in terminal
$ crontab -e

Above command will open crontab window, then add the following line in it:

path/to/script.sh

MEET TEAM

Crontab Window

6. After pressing **crtl+x,** it will ask you for saving changes

7. Now, press **Y** to save your changes

Bravo!!! We have done it. Whenever you restart your machine, Django will run automatically. 😁 I hope you like this article. Share your views to to improve content. Happy Learning !!!

how can i
see the log
of the
running
server?
